

sign

leading the way

sign

Clear and distinctive in its shape, light in appearance, diverse and functional – these characteristics turn *sign* into an all-purpose range of chairs. Through its reduced expression of shape, *sign* does not dominate the architecture, instead it compliments the setting giving emphasis where it is desired.

One distinguishable feature of the *sign* chair range is the variable mix of material: seat and backrest optionally come in plywood, polypropylene, or fully upholstered; the frame is made from a steel tube; the armrest support is manufactured from polished die-cast aluminium; and the armrests are made from beechwood.

The wide range of material options for the seat and backrest can be combined with one another in a variety of ways – thereby creating many optically distinct possibilities. The dimension of the rectangular steel tube profile of the frame combines lightness with stability.

The numerous options allow *sign* to be adapted precisely for each intended purpose. For a meeting or a conference, for a seminar or a training, for an event, a canteen, a cafeteria, or as a side chair in the office – there is an appropriate combination for each function. This guarantees a uniformity in style of the furniture throughout various areas of a building.

The writing tablet is made from compact laminate and is available in anthracite only. It fits both stacking and lounge chairs and can be retro-fitted.

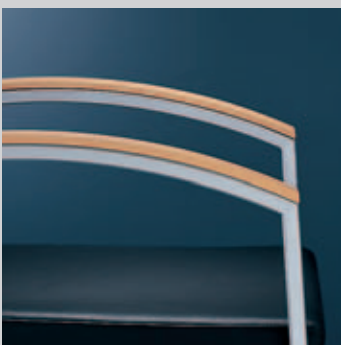

sign

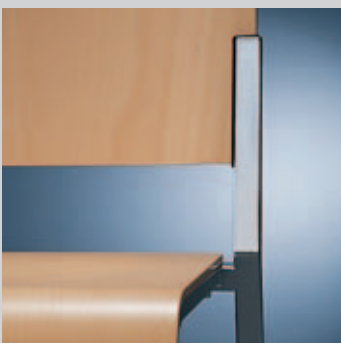

The stacking chairs can be joined together through row-links and can be fitted with seat and row numbers upon request.

Up to ten chairs can be stacked on the floor. A special transport trolley (Model 6396-001) is capable of holding up to 12 chairs.

The laminated wooden armrest of the cantilever precisely follows the soft arch of the metal frame.

A characteristic feature of the stacking chairs is the polished aluminium armrest support.
